# ES data collection: Two sets of results

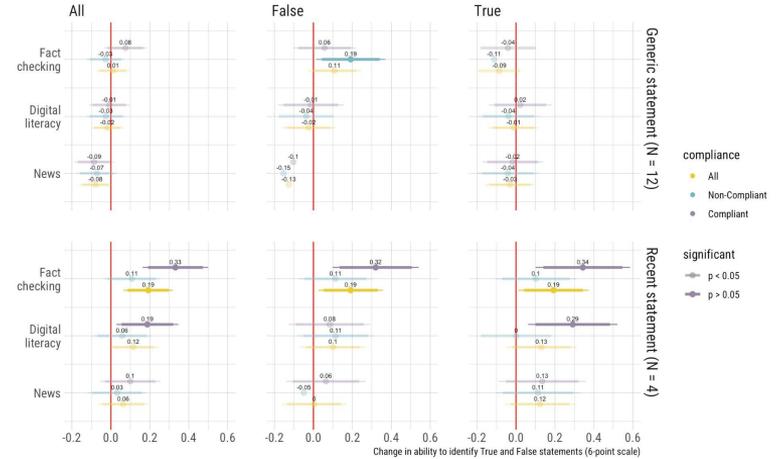

Overview of **data donations** collected

# ES data collection: Two sets of results

Co-authored with Silvia Majó-Vazquez, Georgia Dagher, et al.

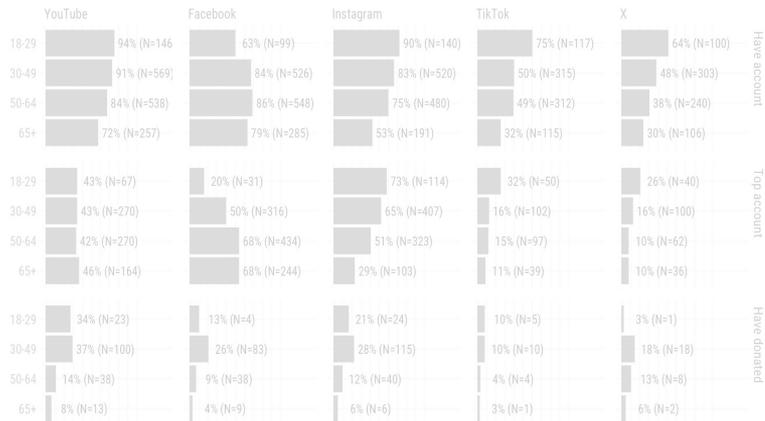

Overview of **data donations** collected

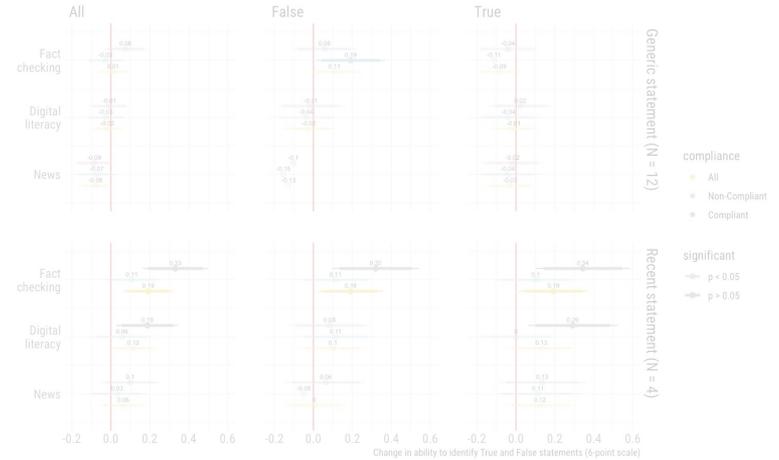

Experimental **intervention** between waves

# ES data collection: Two sets of results

But first a **recap** of what **WHAT IF** is...

Overview of **data donations** collected

Experimental **intervention** between waves

# Members

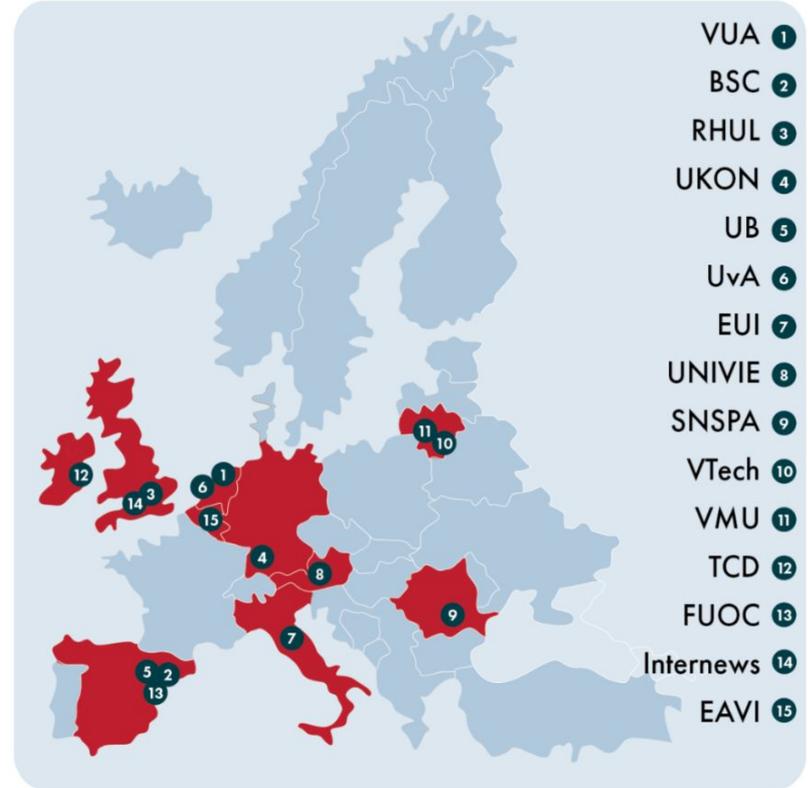

3-year Horizon project (2025-2028)

13 universities

2 societal partners (Internews, EAVI)

10 countries

# Objective

WHAT-IF addresses the challenges of disinformation, hate speech, and polarized information environments by creating an empirically grounded simulation of the digital political information landscape.

Create a digital twin of the political information environment

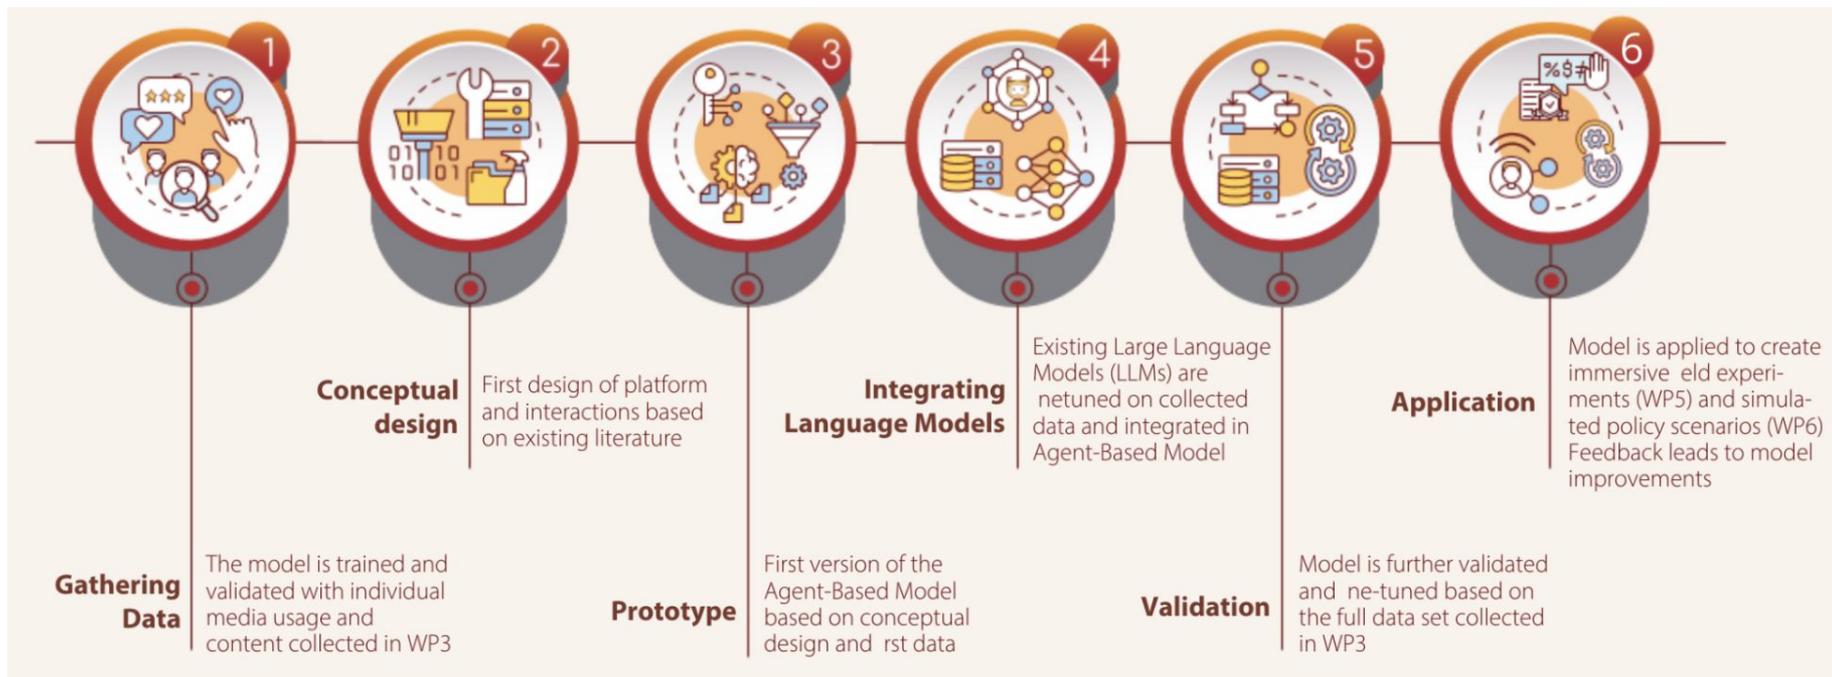

Test the effect of social media content, algorithms and platform affordances

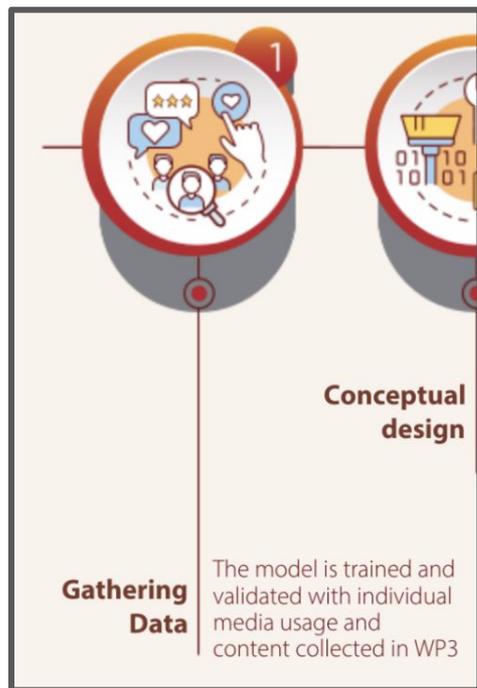

Develop evidence-based policies and regulations

# Approach

# Approach

4 Countries  
ES, LT, NL, RO

Panel Survey

2-wave

1,800/country

Media consumption + political att./behavior

Digital Traces

Browsing

Social media takeouts: FB, IG, YT, TT, X

Adapting tool from D3I project

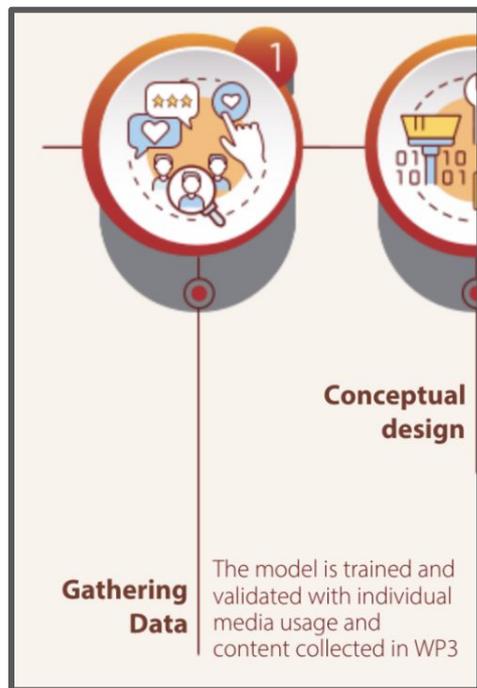

News Scrapers

Get content of news participants accessed

Platform Data

Get SM content participants followed/engaged

# ES panel survey and data donation

- NetQuest-Bilendi
- W1: N = 1,780
- W2 (5 weeks): N = 1,459
- Fully-tracked panel: browsing data for all (laptop + mobile): 10 weeks
  - 5 weeks prior to W1
  - 5 weeks between W1-W2
- Data donation for their top-2 social media platforms (FB, IG, TT, YT, X)
  - N = 326 (~20%)

# ES between-wave intervention

- Misinfo inoculation interventions work:
  - Fact-checking; debunking
  - Media/digital literacy
- Yet, are there some negative effects?
  - Are people becoming more skeptic of news/information in general?  
More likely to think that true news are false?

# ES between-wave intervention

**4 groups** (N ~ 425 per group):

**(1) Control**

**(2) News Boost:** high-quality new quality (**El Pais** & **El Mundo**)

**(3) Fact Checking:** debunking articles from **Maldita**

**(4) Digital Literacy:** educational articles from **Learn To Check**

For 1 month, visit website with 2 stories updated 3/times a week

# ES between-wave intervention

We've pre-registered 4 studies:

- **Accuracy belief**
- Deepfake discernment
- Well being
- Policy positions and affective polarisation

# ES between-wave intervention

Outcome:

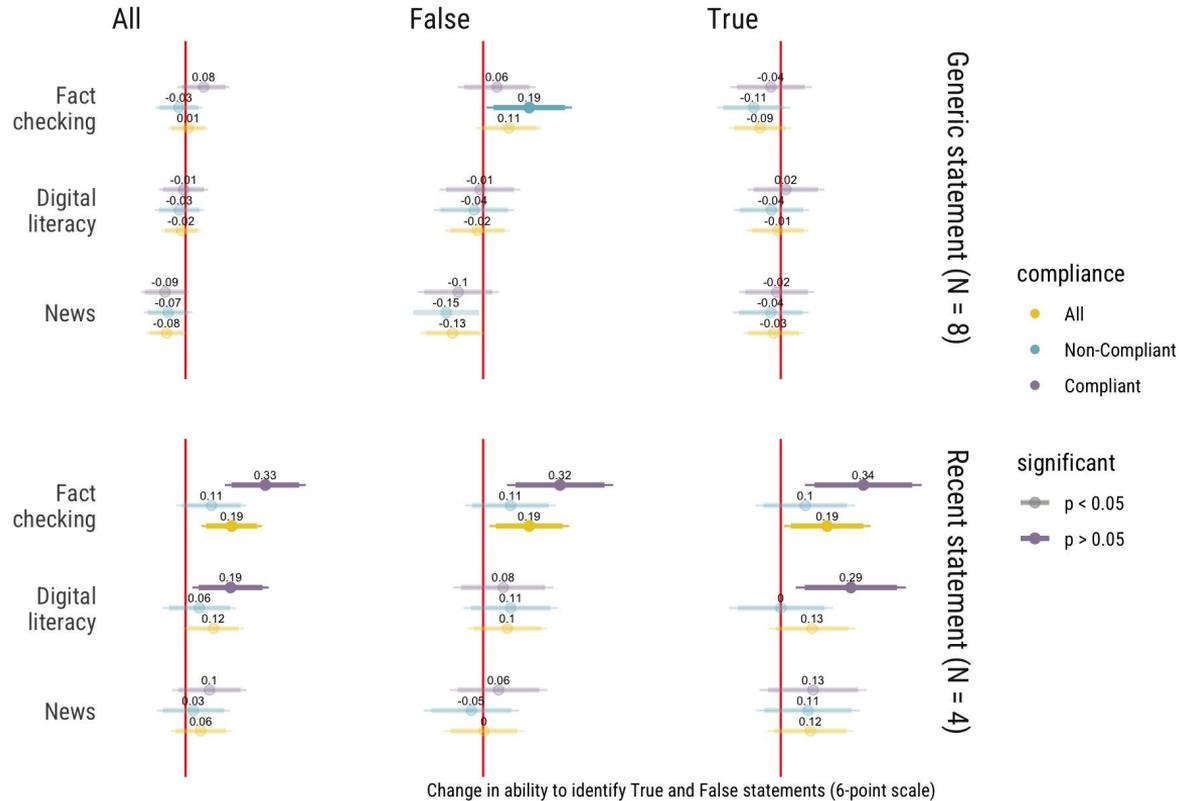

- rate **8 generic statements** (same in W1 and W2)
- rate **4** statements on **specific recent developments** (W2 only)
- topics: **immigration** and **climate change**
- **balanced**: true/false and liberal/conservative
- from **extremely accurate** to **extremely accurate** (6-point scale)

# ES between-wave intervention

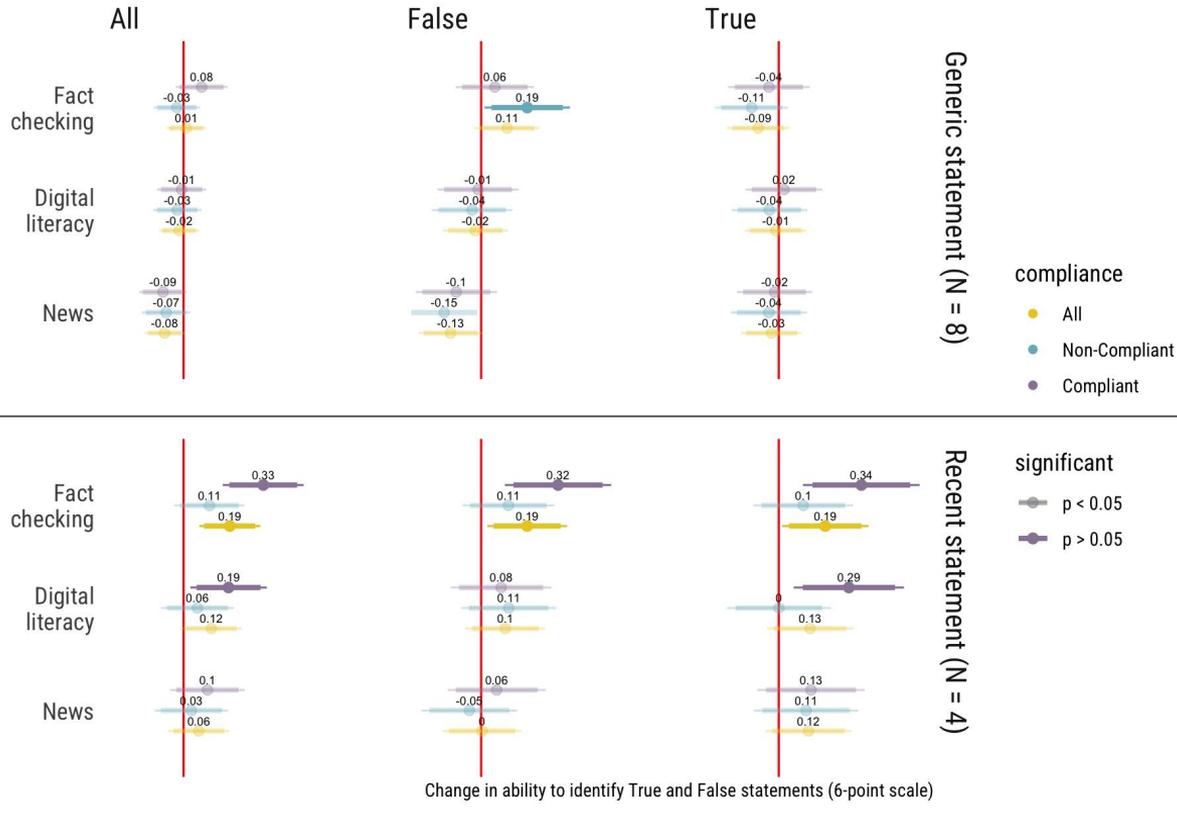

Expectations:

- all treatment groups will get **better** at identifying **False** information
- Fact-checking & Digital-literacy will get **worse** at identifying **True**

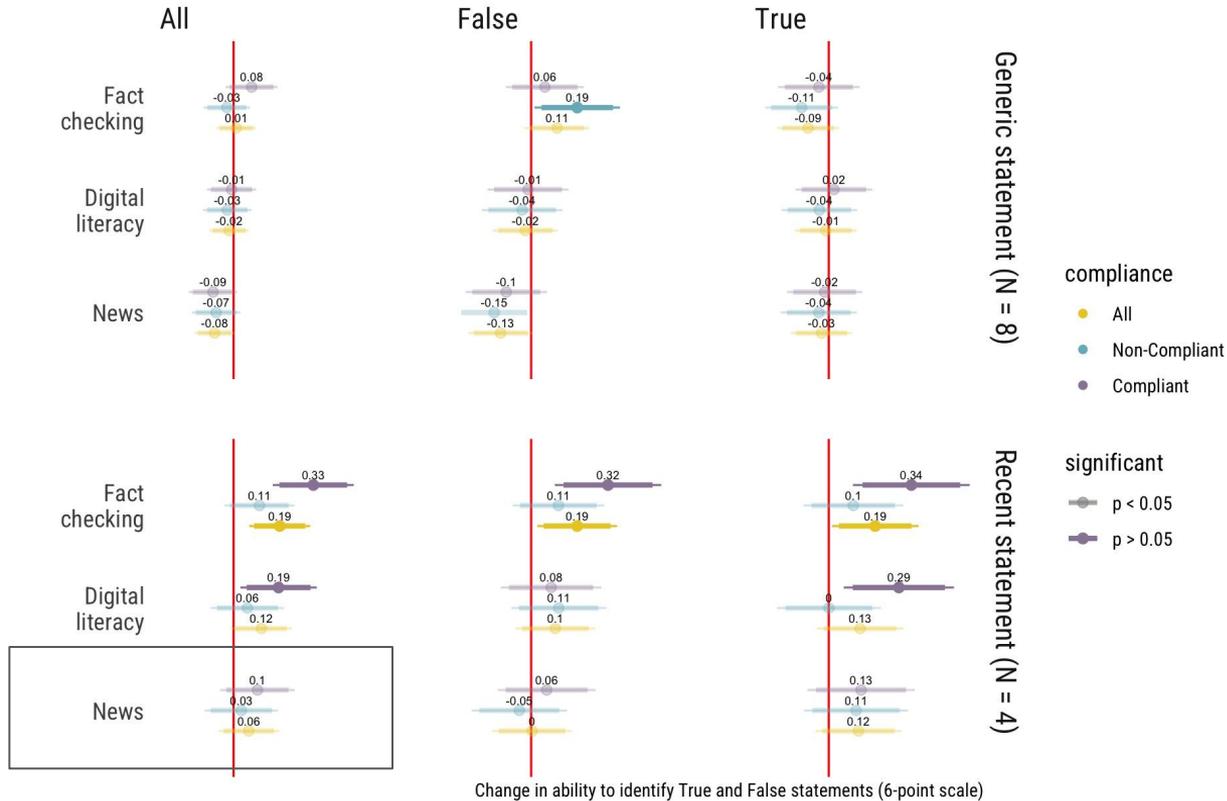

# ES between-wave intervention

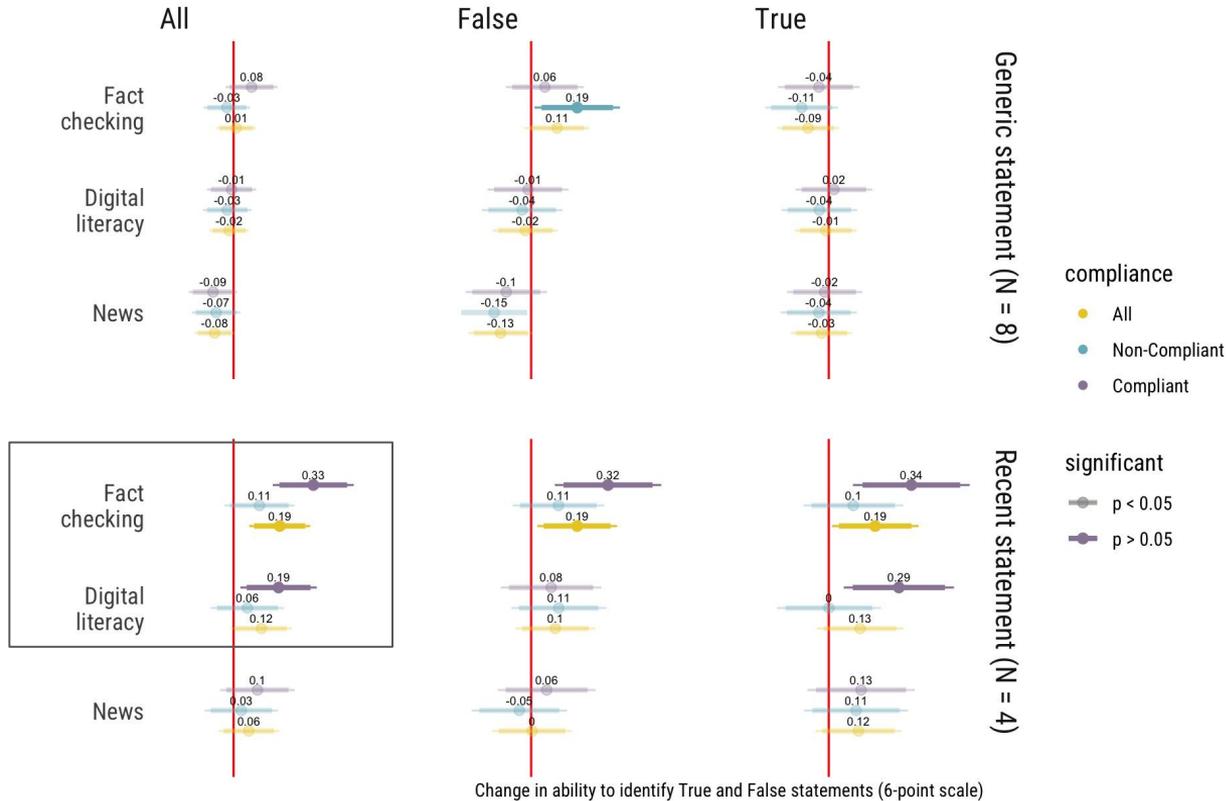

# ES between-wave intervention

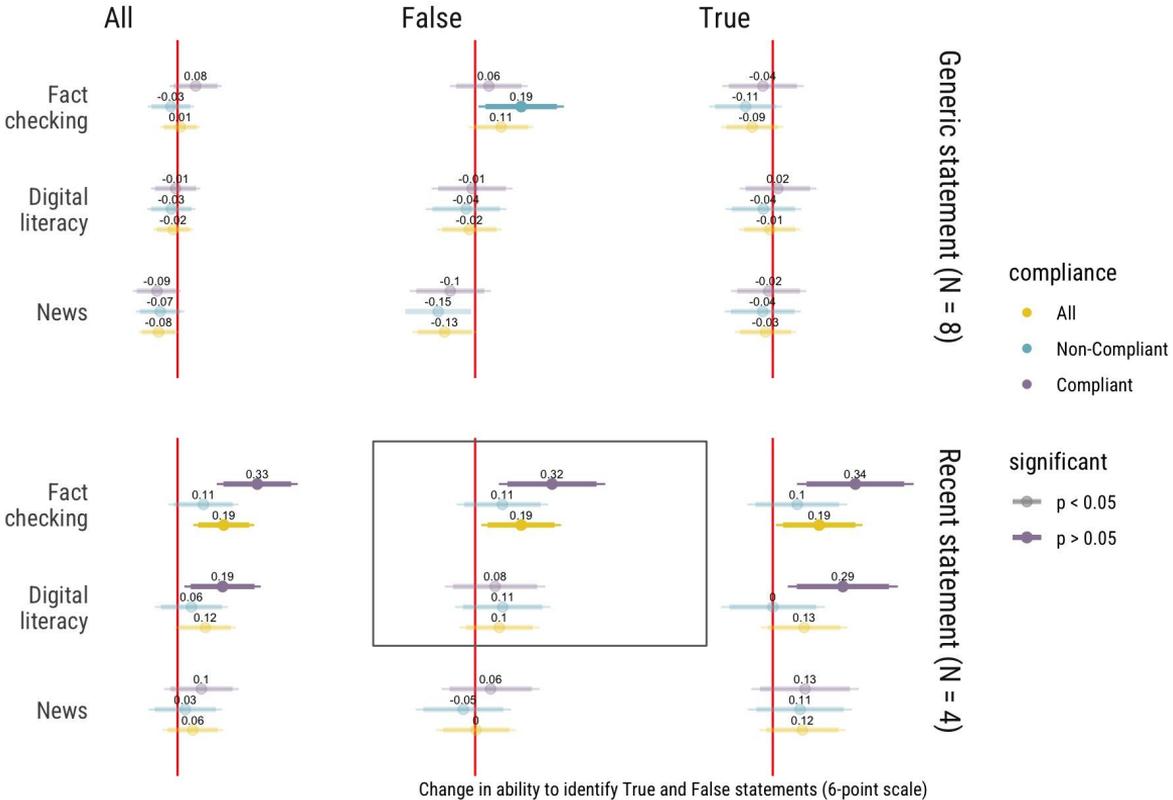

# ES between-wave intervention

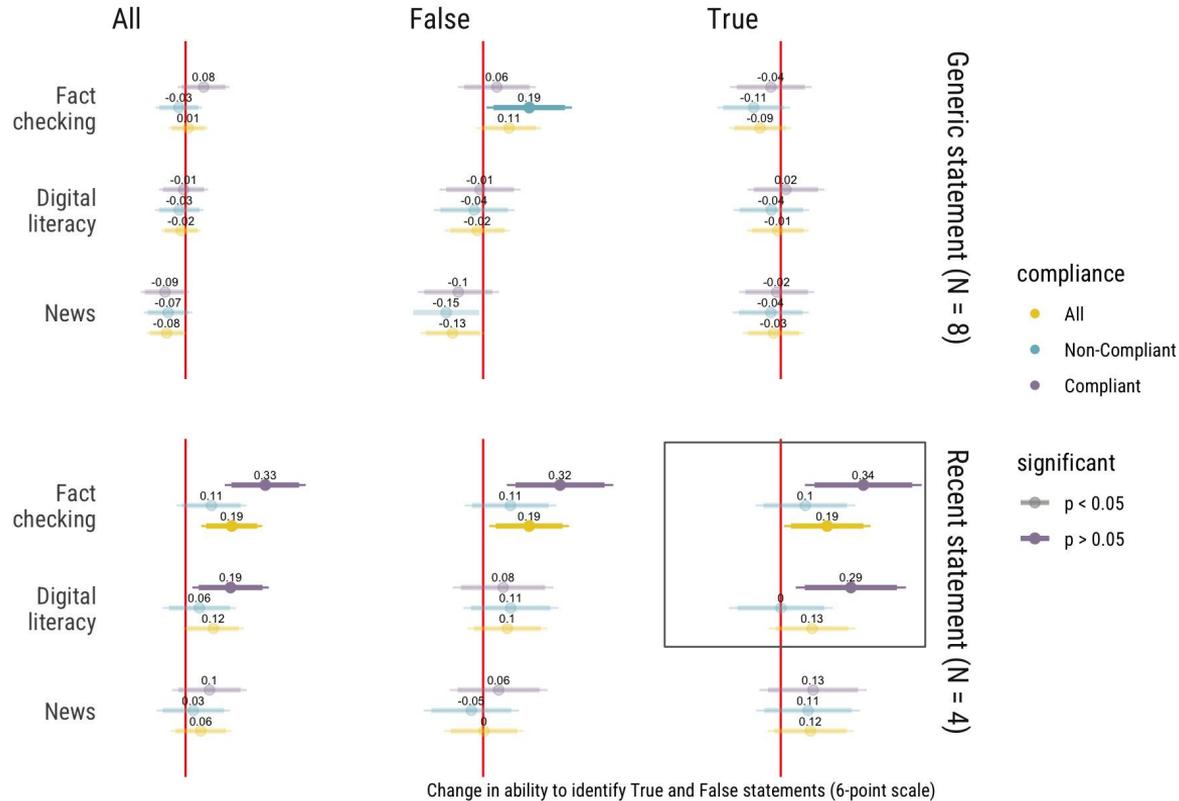

# ES between-wave intervention

# ES between-wave intervention

# ES between-wave intervention

# ES between-wave intervention

Takeaways:

- **Traditional inoculation strategies** work, and do not seem to have the hypothesized negative effects
- Increased **news exposure** didn't really work as an alternative

# ES between-wave intervention

Next steps:

- Same (or very similar) study in **RO** very soon → findings robust?
- With small variation: **more effective formats** for news exposure

Thanks!
